

THE GCP REVENUE HORIZON — FLORIDA

Monthly Revenue Focus | Unclaimed Property Identification

Why This Matters Right Now

Florida's high-volume utility and service environments create constant transactional activity — increasing the likelihood of dormant balances over time. First Quarter of the Year identification helps agencies assess potential opportunity before peak operational periods. This process also gives insight into valuable internal control practices and policies.

What Finance Directors Are Seeing

- Utility and service credits tied to seasonal or transient customers
- Vendor refunds linked to facilities and tourism operations
- Claims generated by system transitions
- Prior searches that did not account for volume-driven activity

GCP Unclaimed Property Identification Services — Florida

GCP assists Florida agencies by:

- Performing research-only identification across state, federal, and private databases
- Focusing on high-volume operational entities such as utilities and service departments
- Validating potential matches and summarizing findings
- Providing a Claim Instruction Guide to support internal review

Claim preparation support is also provided for \$25 per claim form.
